OSI MODEL – DATA UNITS CONCEPT MAP
CSA0720 – Computer Networks

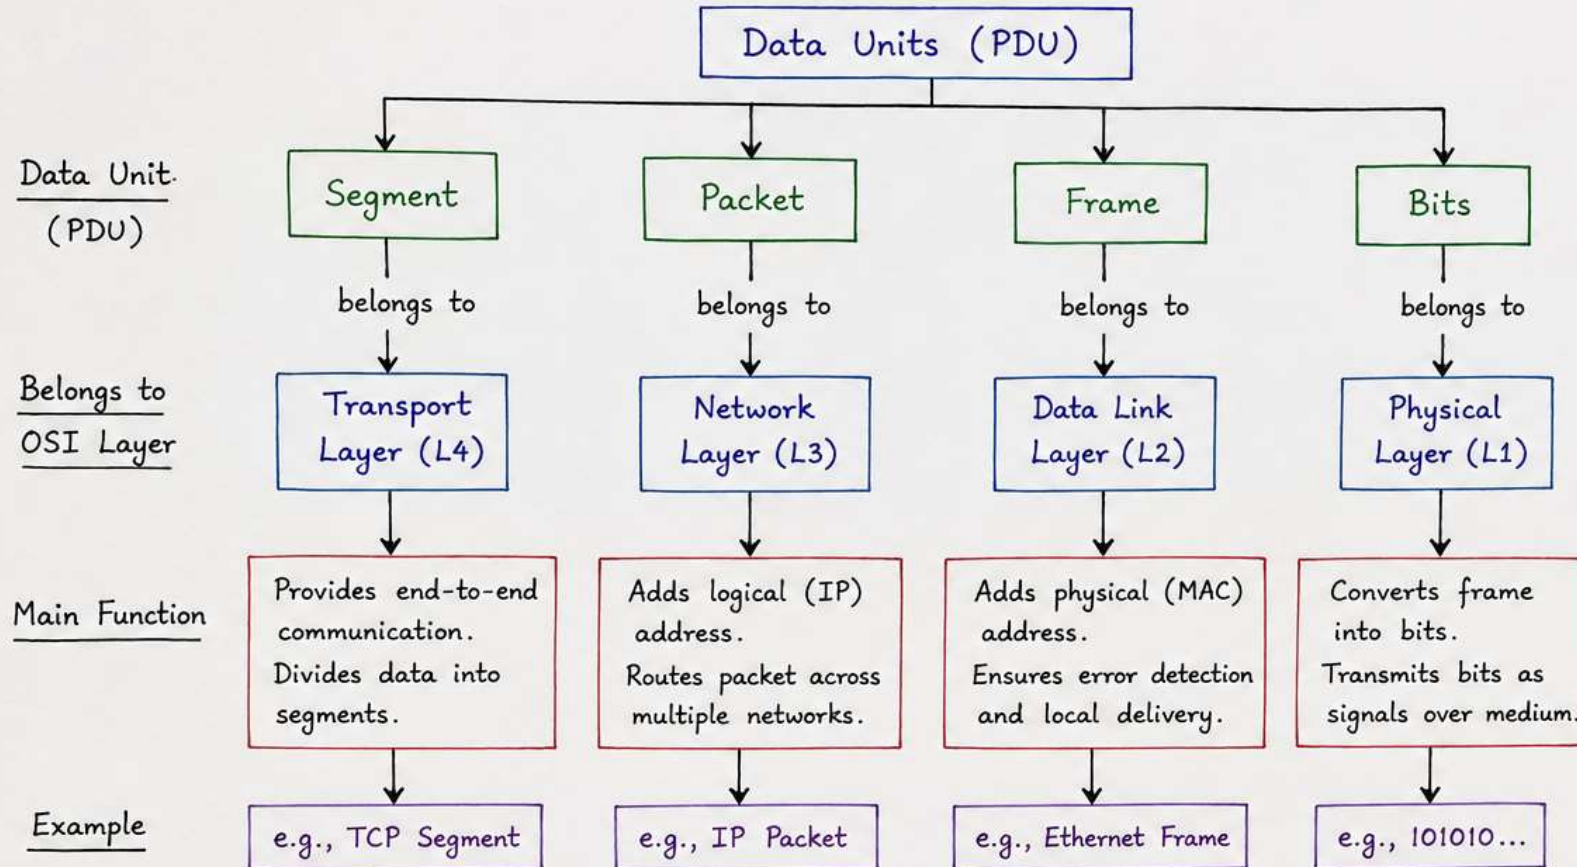

Guided by

Dr. Agnes Shifani

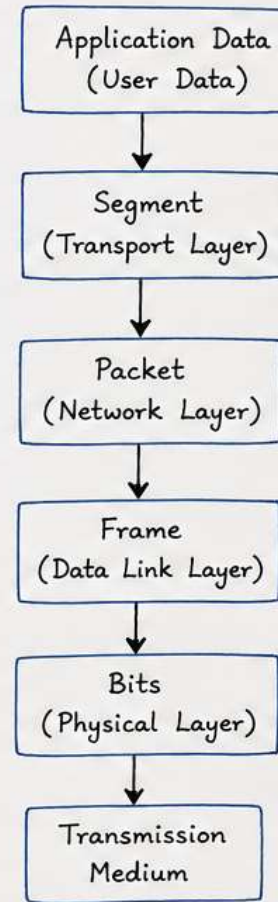

Presented by

K Suthesika – 192511070

Concept Map : OSI Model - Data Units

Transformation of Data (Encapsulation)

Decapsulation
(Reverse Process at Receiver)

How Transformation of Data Units Supports Transmission

- At each layer, headers (and trailers) are added to the data to form a new PDU.
- This helps in addressing, routing, error checking and reliable delivery.
- At the receiver, the reverse process (decapsulation) removes headers layer by layer to retrieve the original data.
- Thus, transformation of data units ensures reliable and efficient communication across networks.
